

Student Employment Opportunity

The Center for Water and the Environment (CWE) in the UNM School of Engineering has a job opportunity available for an undergraduate or graduate student. The CWE conducts outreach activities at local middle schools, high schools, and community events to encourage students to consider careers in science and engineering and is in need of a student to help organize and coordinate these events.

RESPONSIBILITIES:

The student will be expected to organize student volunteers for these events, assist with the development of marketing and outreach materials, and track outreach demonstrations, resources, events, and evaluations following these events. The CWE has built several hands-on activities for use at these events. The student coordinator will be expected to coordinate the use of these activities, assist with the development of instructions, handouts, and training for these activities, and make sure the materials are maintained and ready to use. The student may also have the opportunity to get involved in laboratory research within the center.

REQUIREMENTS:

Excellent organizational and communication skills are required. Students from groups underrepresented in engineering are particularly encouraged to apply. The position will be funded by a National Science Foundation grant, and only U.S. citizens, nationals, or permanent residents can be funded under this program.

HOW TO APPLY:

To be considered for this position, send an email describing your interest to Dr. Kerry Howe (Center Director) at howe@unm.edu and Dr. Vanessa Valentin (Center Outreach Coordinator) at vv@unm.edu. Include a resume and a statement about why you are ideal for this position.

The Center for Water and the Environment (CWE) is focused on performing world-class research on water and energy issues while expanding the presence of historically underrepresented groups in science and engineering disciplines. More information about the CWE is available at cwe.unm.edu.
