

## Water Mania!

Dive into water science with Explora and UNM's Center for Water and Environment. Work with scientists in our virtual classroom, and do hands-on water resource activities over 3 one-hour sessions that explore:

- Testing water quality
- Building water level monitors
- Careers in water management and resources

All participants will receive activity materials before the virtual program and will be guided by UNM scientists specializing in this field! Participants will gain experience with coding, inventing, working on water samples, and water quality parameters and will learn about careers related to water.

Sessions will be offered the weeks of Oct 5, Oct 19, Nov 2, and Nov 16. To register your class please email Anthony Salvagno: [asalvagno@explora.us](mailto:asalvagno@explora.us)
